

ERP DOCUMENT

Enterprise Resource Planning (ERP) has to be utilized by the institution for a smooth and better functioning with a centralized and integrated system. The institution has to manage the data of the stakeholders (Students, Staff, Parents) and also the issues related to administration, accounts, examination, library and transport by utilizing the ERP software.

ERP unifies many functional areas of the institution that have many sub functions associated which are related to stakeholders. Based on the organizational hierarchy, privileges are assigned to exercise and execute day to day activities. With the centralized database of the ERP system the data will be retrieved more easily and precisely and the data thus extracted can be utilized to prepare and analyze the reports.

As long as the vendor provides assistance to the software and maintenance, the ERP will be an excellent tool to manage the activities of the institute. The institution purchased automation package (ECAP) from Webpros solutions private limited in the year 2017. The ERP software hereinafter referred to as ECAP, fulfils all the requirements of our institution which includes Academic and Administrative activities of undergraduate and postgraduate programs with transparency.

The features of ECAP software are listed below;

- ✦ Internet or intranet enabled application
- ✦ User levels with access rights for data security
- ✦ Program/batch/category student fee due reports
- ✦ Tracks student's scholarship status
- ✦ Fee/Attendance Reminders and Progress reports

Principal
GIET ENGINEERING COLLEGE,
NH-16, Chaitanya Knowledge City,
RAJAHMUNDRY-533 296.

- Attendance and Marks analysis
- Integration with Attendance Capturing Devices
- Accounts Module similar to Tally
- Barcode Integrated Library Module
- Login for Students/ Parents to access data online

The ERP software is linked to the college website, wherein accessibility is provided to employees, students and parents. The options exercised will determine the functions/domains that can be accessed by the user. Employees have more options when compared to students and parents, whereas the students and parents have only a restricted access to check the performance of day-to-day activities.
